64MZ

64MZ

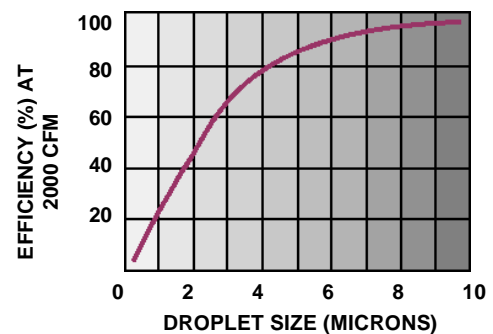

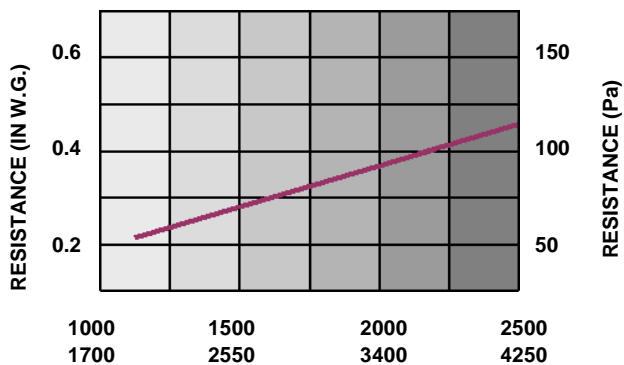

The low velocity 64MZ Moisture Separator offers traditionally high droplet efficiency as well as low wet or dry pressure drop.

Inlet moisture control systems are essential for the proper operation of turbo machinery. The 64 MZ Moisture Separator is a panel type droplet separator comprised of alternate layers of flat and herringbone crimped galvanized screen. It comes retained in a galvanized steel or stainless steel frame with bottom drain holes.

The 64 MZ Moisture Separator is available in galvanized steel, type 304 stainless steel and type 316 stainless steel.
