HESB F 8 Media Pocket (Bag) Filter

HESB (F8) Media Pocket (Bag) Filter

Direct Replacement for *altair** SN8® Bag Filter

DRB's Synthetic Media Bag Filters come in 95% Efficient (F-8) performance and sizes to replace the Altair Super Nova SN8 Filter Bag. The DRB (HESB) has 6 pockets of 100% synthetic polypropylene lofted microfiber media.

There is a non-flammable adhesive applied to the entire header & pocket channels. The entire steel support element is staked, riveted, and glued into one composite framework to ensure leak proof pocket attachment. Cover strips are also provided to add structural integrity. A neoprene rubber gasket is standard on the air exit side (back) of header.

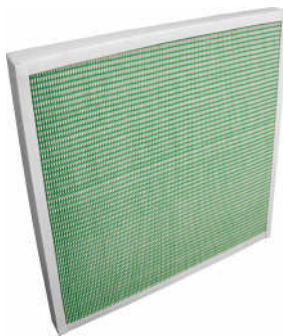

Part #	ASHRAE Rating	MERV Value	E1%	E2%	E3%	Initial Resistance	Final Resistance
HESB	F8 > 96%	MERV 14	82	97	99	0.43	1.50

- * UL 900 Class 2 Rated
- * Resistant to 100% Relative Humidity
- * Maximum temperature - 200° F
- * Resistant to Moisture & Microbial Growth
- * Dimensions – 25 1/2" x 22 3/4" x 28"
- * 5 Pocket (100% Polypropylene Stitched Pockets)
- * Filter Media – 100% Polypropylene Lofted Microfiber
- * Gasket on Air Exit Side of Header

Also Available:

SMP Mini-Pleat Panel Filter

Direct Replacement for Altair Pre-Filter Panels

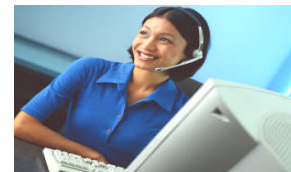

The SMP Mini-Pleat Panel Filter offers maximum filtration in a 2" filter frame. The media is a single web of gradient density fibers which achieves high dust holding, high efficiency, and low pressure drop. The pleats are held rigid and evenly spaced to maintain even loading and air distribution. The entire filter is constructed of polypropylene which offers several advantages; one being the filter does not support the growth of bacteria, fungi, or mold. Another benefit is that these filters will not corrode or degrade over an extended service period, even under high humidity conditions. Polypropylene media is much more puncture resistant than glass paper and is resistance to most chemicals.

Part # PF-GD-MP	MERV 8 - 12
Sizes	25.5" x 22.75" x 2"
Square Feet of Media	60ft ² (5.6m ²) +/-
