

EVAPORATIVE COOLING INSTALLATION & REPLACEMENT

DRB Industries will install and commission Evaporative Coolers and Media in Gas Turbine Filter Houses. We are experts at installing evaporative cooling media, replacing deteriorated pads and drift eliminator for your outage schedules. We also perform repair work during off-peak periods. All our installation services also include annual commissioning services per OEM recommendations.

Our qualified service crews can come on-site and replace your evaporative cooling media at a very economical price, on time, and within budget. We also do interior corrections and recaulking (both interior & exterior). DRB will correct your media polarity problems, including water carry over. We do dry and wet run testing and all related evaporative cooling work, including sump pump & inspections based on necessity.

DRB Industries can also perform minor repair work on your Filter House. We supply all types of filters and holding frames, along with instruments and gauges and piping and flow distribution equipment to give you the best power augmentation possible for your Gas Turbine Filter House.
